

EvalRight – All Order Details Module Documentation

This document explains the All Order Details screen inside the Reports & Orders module of the EvalRight application. The module is mainly used for advanced searching, filtering, and tracking of verification orders and reports.

All Order Details Screen

The screenshot displays the EvalRight application interface. The top navigation bar includes the EvalRight logo and a search bar. The left sidebar lists various modules: Home, Order, Reports & Orders (selected), Applicants, Account Settings, and Drug Screening. The main content area is titled 'All Order Details' and features a search form with multiple filters. The filters include Search ID, Report ID, Status (Any Status), Search Type / Name (All Searches), First Name, Last Name, SSN, DOB, County, State, Order Reference, Order Date From, Order Date To, Sort Order Status, Searches per page (20 Searches), Age (All), Applicant Email, and Criminal Records Found (All). There are 'Search' and 'Reset' buttons. Below the form, a green banner indicates '41 Records Found, Page 1 of 3'. The search results table shows two entries: Search ID 8887753 for Mounika Vurugonda Jr. and Search ID 8514399 for Sindhuja Yedire.

The above screen displays the advanced order filtering and search management interface used by clients/admins to locate verification records quickly.

1. Purpose of All Order Details Module

- Centralized advanced search system for all verification records.
- Allows filtering of applicant reports and searches.
- Used for operational tracking and auditing.
- Supports quick access to verification reports.

2. Search Filters Available

- Search ID – Search using unique verification search number.
- Report ID – Search using generated report ID.
- Status – Filter by verification status.
- Search Type/Name – Filter by verification category.
- First Name – Applicant first name filter.

- Last Name – Applicant surname filter.
- SSN – Search by SSN or identity information.
- DOB – Search by applicant date of birth.
- County – County-based search filter.
- State – State-based verification filter.
- Order Reference – Internal reference tracking.
- Order Date From/To – Date range filtering.
- Sort Order – Result sorting functionality.
- Searches Per Page – Pagination controls.
- Age – Applicant age filter.
- Applicant Email – Email-based search.
- Criminal Records Found – Criminal record status filter.
- Ordered By – User/client-based filtering.

3. Search & Reset Buttons

- Search button executes the filter query.
- Reset button clears all filter fields.
- Allows operational teams to quickly refine results.
- Supports large-scale search management.

4. Search Results Section

- Displays filtered verification records.
- Each result includes Search ID and applicant details.
- Verification type is shown beside applicant name.
- Statuses appear on the right side.

5. Status Indicators

- CANCELLED indicates stopped or terminated verification.
- Other statuses may include CLOSED, PENDING, IN PROGRESS.
- Color badges improve quick operational visibility.

6. Pagination System

- Supports multiple pages of search results.
- Users can navigate between result pages.
- Improves performance for large datasets.

7. Workflow Explanation

- User opens Reports & Orders module.
- User enters filter criteria.
- Search query runs against verification database.
- Matching search records are displayed.
- User opens detailed report or verification record.

8. Backend Functional Understanding

- Filters dynamically generate SQL/database queries.
- Search results are fetched from verification records.
- Pagination reduces database load.
- Statuses update dynamically based on workflow stage.
- Role permissions control visibility.

9. Minor Functional Features

- Dropdown-based filtering system.
- Advanced search optimization.
- Responsive grid-based filter layout.
- Real-time operational visibility.
- Easy report retrieval.

10. Business Purpose

- Helps clients/admins locate verification reports quickly.
- Improves operational efficiency.
- Supports compliance and audit activities.
- Allows detailed verification tracking.

Possible Database Tables Used

Table Name	Purpose
searches	Stores verification searches
reports	Generated verification reports
orders	Verification order information
applicants	Applicant personal details
criminal_records	Criminal verification data
