

GoldQuest Background Verification (BGV)

API Documentation

Version: 1.0

Base URL: `http://api.goldquestglobal.in/branch/api/`

Authentication: Access Token (query/body parameter)

Overview

The Branch BGV API allows clients to:

1. Retrieve the list of verification services allocated to them.
2. Create candidate applications and send automatic BGV links to candidates.
3. Create client applications with direct document uploads for internal verification.

Each API endpoint is REST-based and communicates via JSON.

Authentication

All endpoints require an `access_token`.

It must be passed as:

- A **query parameter** for `GET` requests
 - A **JSON field** in the **request body** for `POST` requests
-

1. Get Allocated Services

Endpoint

```
GET /branch/api/services
```

Query Parameters

Parameter	Type	Required	Description
access_token	string		Unique token assigned to the client.

Example Request

```
fetch("http://api.goldquestglobal.in/branch/api/services?access_token=27",
  method: "GET",
  redirect: "follow"
})
.then(response => response.json())
.then(result => console.log(result))
.catch(error => console.error(error));
```

Response

```
{
  "status": true,
  "message": "Customer allocated services fetched successfully.",
  "data": {
    "services": [
      {
        "id": 1,
        "title": "LATEST EMPLOYMENT-1",
        "group": "Employment"
      },
      {
        "id": 2,
        "title": "EX-EMPLOYMENT-2",
        "group": "Employment"
      },
      {
        "id": 3,
        "title": "PREVIOUS EMPLOYMENT-3",
        "group": "Employment"
      }
    ]
  }
}
```

```
    ]  
  }  
}
```

Purpose

Fetches all BGV (Background Verification) services allocated to the client.

2. Create Candidate Application

Endpoint

```
POST /branch/api/candidate-application/create
```

Headers

Key	Value
Content-Type	application/json

Request Body

Field	Type	Required	Description
access_token	string	✓	Client's access token
name	string	✓	Candidate's full name
employee_id	string	✓	Employee code or identifier
mobile_number	string	✓	Candidate's contact number
email	string	✓	Candidate's email ID
services	string	✓	Comma-separated service IDs
nationality	string	✓	Candidate's nationality
purpose_of_application	string	✓	e.g., "NORMAL BGV (EMPLOYMENT)"

Example Request

```
const myHeaders = new Headers();
myHeaders.append("Content-Type", "application/json");

const raw = JSON.stringify({
  "access_token": "<ACCESS_TOKEN>",
  "name": "John Doe",
  "employee_id": "EMP12345",
  "mobile_number": "8888888888",
  "email": "johndoe@example.com",
  "services": "1,2,3,4,5,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22",
  "nationality": "Indian",
  "purpose_of_application": "NORMAL BGV(EMPLOYMENT)"
});

fetch("http://api.goldquestglobal.in/branch/api/candidate-application/candidate-application", {
  method: "POST",
  headers: myHeaders,
  body: raw,
  redirect: "follow"
})
.then(response => response.json())
.then(result => console.log(result))
.catch(error => console.error(error));
```

Response

```
{
  "status": true,
  "message": "Candidate link generated and sent successfully."
}
```

Purpose

Creates a candidate BGV application and automatically sends a verification link to the candidate's email or mobile.

3. Create Client Application (With Document Upload)

Endpoint

POST /branch/api/client-application/create

Headers

Key	Value
Content-Type	application/json

Request Body

Field	Type	Required	Description
access_token	string	✓	Client's access token
name	string	✓	Candidate's full name
employee_id	string	✓	Employee code
spoc	string	✗	Single Point of Contact name
location	string	✗	Client branch/location
batch_number	string	✗	Batch reference if applicable
sub_client	string	✗	Sub-client name
services	array	✓	List of service IDs
nationality	string	✓	Candidate's nationality
attach_documents	array	✓	Base64-encoded supporting documents
photo	string	✓	Base64-encoded candidate photo

Example Request

```
const myHeaders = new Headers();
myHeaders.append("Content-Type", "application/json");

const raw = JSON.stringify({
  "access_token": "<ACCESS_TOKEN>",
  "name": "John Doe",
  "employee_id": "EMP12345",
  "spoc": "",
  "location": "",
  "batch_number": "",
  "sub_client": "",
  "services": ["1", "2", "3", "4"],
  "nationality": "Indian",
  "attach_documents": [
    "...",
    "..."
  ],
  "photo": "..."
});

fetch("http://api.goldquestglobal.in/branch/api/client-application/create", {
  method: "POST",
  headers: myHeaders,
  body: raw,
  redirect: "follow"
})
  .then(response => response.json())
  .then(result => console.log(result))
  .catch(error => console.error(error));
```

Response

```
{
  "status": "success",
  "message": "Client application created successfully."
}
```

Purpose

Creates a complete BGV application by directly submitting client-uploaded data and documents.

Summary

#	API Name	Method	Endpoint	Description
1	Get Allocated Services	GET	/branch/api/services	Fetches list of BGV services available to the client
2	Create Candidate Application	POST	/branch/api/candidate-application/create	Registers candidate and sends BGV link
3	Create Client Application	POST	/branch/api/client-application/create	Creates internal BGV record with uploaded documents

Error Responses

Code	Message	Description
401	Invalid access token	The provided token is missing or invalid
400	Missing required fields	Some required inputs are not provided
500	Server error	Something went wrong on the backend
