The above screen displays the Reports & Orders management module where clients can track verification orders, monitor statuses, access reports, and manage verification workflows.

1. Reports & Orders Main Module

- Centralized management of all verification searches/orders.
- Displays all applicant verification records.
- Tracks verification statuses in real time.
- Allows quick visibility of completed, cancelled, or pending cases.

2. Left Sidebar Navigation

- All Order Details – Displays all search records.
- Orders List – Shows verification orders only.

- Draft Order List – Stores incomplete orders.
- Order Summary Report – High-level report analytics.
- Electronic Consents – Tracks signed applicant consents.
- Adverse Worksheets – Manage adverse action workflows.
- Adverse Actions Log – History of adverse actions.
- Analytics – Reporting and statistics.
- HR Software Integrations – External HR system integrations.
- Disputes List – Applicant dispute management.

3. Search ID Listing

- Each verification request has a unique Search ID.
- Search IDs are used for tracking and auditing.
- Clickable records likely open detailed report pages.
- Search records are linked to applicants and verification types.

4. Applicant Verification Records

- Applicant names are displayed with verification type.
- Examples include Employment Verification, Education Verification, Criminal Checks, Military Service Verification, SSN Trace, and Global Watch List.
- Each verification type represents a separate verification component.
- Multiple verifications can exist under one applicant.

5. Status Indicators

- CLOSED status indicates completed verification workflow.
- CANCELLED status means verification process was stopped.
- Blue timers indicate pending or aging cases.
- Color coding improves operational visibility.

6. Verification Types Observed

- SSN Trace/Address History
- Military Service Verification
- Education Verification
- Employment Verification
- Nationwide Criminal Search
- Federal Criminal Search
- Global Watch List
- Reference Verification

7. Workflow Explanation

- Client creates order or invitation.
- Applicant submits required information.
- Verification team processes checks.
- Statuses update dynamically.
- Completed reports become downloadable.
- Invoices and audit logs are maintained.

8. Backend Functional Understanding

- Search records are fetched dynamically from the database.
- Each status update changes workflow state.
- Verification components are linked to applicants.
- Admin users can monitor all client searches.
- Analytics modules calculate operational statistics.

9. Minor UI Features

- Sidebar dropdown navigation.
- Search and filter functionality.
- Status color badges.
- Scrollable listing layout.
- Real-time status visibility.
- Role-based access management.

10. Business Purpose

- Allows clients to monitor all background verification activities.
- Improves visibility into pending and completed checks.
- Provides centralized report management.
- Supports compliance and audit tracking.

Possible Database Tables Used

Table Name	Purpose
orders	Stores verification orders
searches	Stores individual search components
applicants	Applicant personal information
reports	Generated verification reports

consents

Electronic consent tracking

disputes

Applicant disputes

analytics

Operational analytics data
